TOUCHSCREEN INTRODUCTION

1.Blue tooth

Get your phone connected.

Step 1: Power on the vehicle .

Step 2: Enable Blue tooth function on your cell phone.

Step 3: Search for "GeminicXXXXX" in your device list.

Step 4: Choose the device to establish the connections . now you can make phone calls or play music out of your phone.

Step 5: Go to Usable Device can check the connected devices. You can also turn on the 'Auto answer' and 'Auto load phonebook' function.

Use the dial pad to enter the number you need to dial.

Tap button  to delete the entered characters one by one.

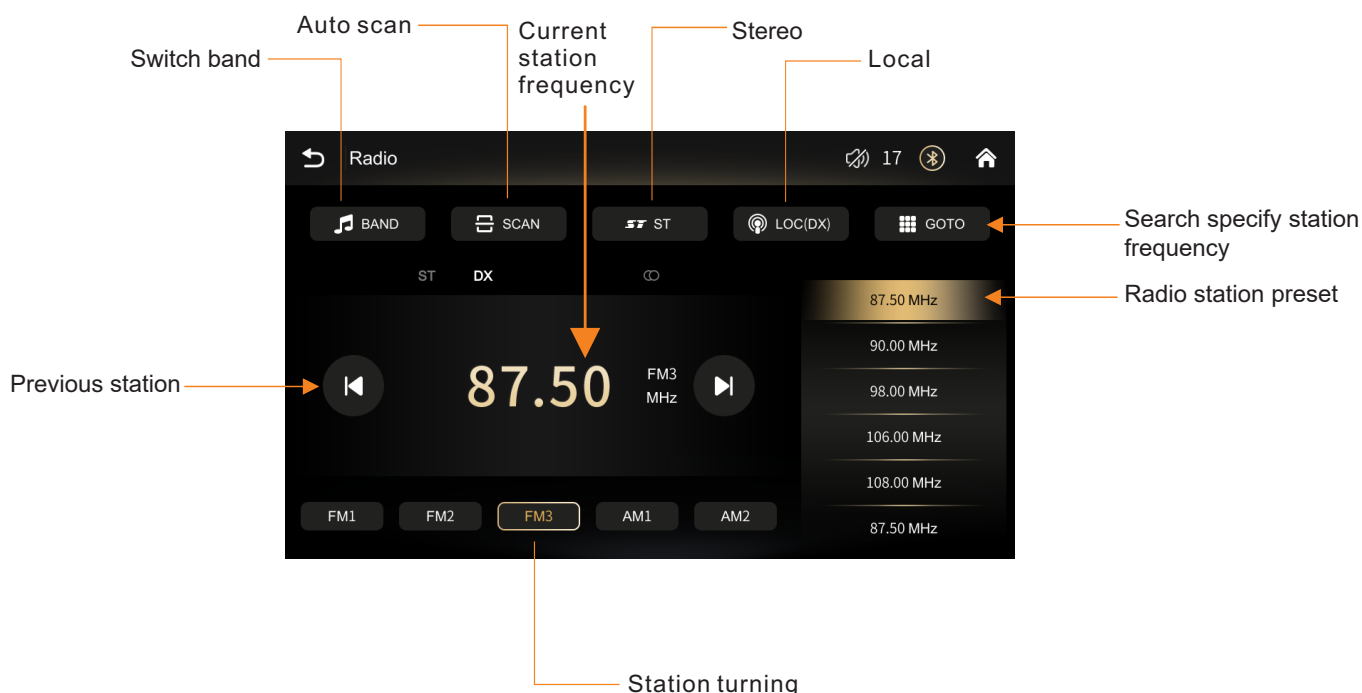

Press and hold Button  to continuously delete characters until all entered characters are deleted.

Tap button  to dial the entered number.

You can also check the Recents and Contacts.

Be familiar with vehicle features before attempting any operations.

2. Radio

Store the sequence of stations:

When the automatic search station function **SCAN** is activated, the meter will automatically search for the local radio station, and the radio frequency number is stored in the local, convenient for users to call and manage. Up to 30 stations can be stored, and 6 preset stations are displayed in each column of the right window area. There are 5 bands that you can choose.

Storage station selection:

The two buttons **◀** and **▶** can be used to search the previous/next station of the preset station, respectively.

Stereo logo:

If the current station broadcasts in stereo and the current signal meets the stereo decoding requirements, **ST** icon will be activated or you can manually activate or deactivate it by using the **ST** switch.

Current station store page serial number:

If the station being played has a serial number greater than 6, say the seventh station, because only five preset stations can be displayed per band, the current station will be stored on the second band, so the current position will be displayed FM2, and so on if you are playing the thirteenth station, the current position will be displayed FM3. There are 30 stations can be stored, and 6 stations per band.

Radio frequency fine-tuning:

◀ ▶ Press and hold these two keys are mainly used to fine-tune the current radio frequency so that the signal demodulation is more accurate and the sound is clearer. Sometimes the frequency selected by the automatic search function may not be accurate, and this function can make up for the slight deficiency of the automatic search function.

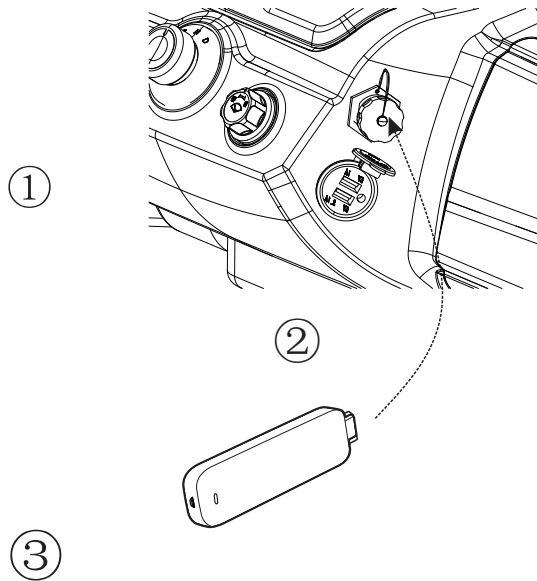

Local first:

LOC This button will give preference to local stations and ignore non-local stations (which, in theory, will have a weaker signal).
